

# MUHAMMAD KHAIRUL MADANI

## MOBILE DEVELOPER

Yogyakarta, Indonesia | [Github](#) | [LinkedIn](#) | [Website](#) | [WhatsApp](#) | [Gmail](#)

## SUMMARY

---

I am a junior mobile developer. I have a good understanding of user-friendly and optimally functioning user interfaces. I am familiar with using typescript and javascript programming and experienced in integrating user interface with backend using Rest API.

In addition, I have skills as IT Support

I am accustomed to installing windows and linux operating systems, repairing faulty operating systems, and can also do network installation.

## SKILLS

---

**Languages :** Indonesia (Native), English(Basic), Arabic(Basic)

**Programming Languages:** HTML5, CSS3, Javascript, Typescript

**Frameworks:** React JS, React Native(CLI, Expo), Bootstrap

**Source Control:** Git, Github

**Others:** Axios, Redux, Postman, Figma

**Relevant Skills:** Frontend Web Development, Mobile App Development

**Installations:** Windows, Linux, Network System

## PROJECTS

---

### • System of Santri

- Build and develop an application to manage and record all student activities to optimize the student learning system.
- Create a user and admin authentication system.
- Create a barcode scanner feature to improve the student attendance system.

**Tech Stacks :** Javascript, React Native.

**Project Link:** <https://appetize.io/embed/y3nwudevp6x3zyfsmdg4hvxvjg>

### • Absensi Siswa

- Build a student attendance application that aims to record student attendance for each subject.
- Create a CRUD (Create read update delete) student attendance feature and input attendance data information.
- Create an Async Storage feature for attendance data storage.

**Tech Stacks :** Javascript, React Native.

**Project Link:** <https://appetize.io/embed/biojz2c2ovsvurqe4pv5lc6x3q>

### • Al-quran Digital

- Build this Digital Quran application which aims to make it easier for us when we don't bring a mushaf or are outside.
- Create surah and juz options where there is a sound feature for each surah.
- This application is created by consuming the API and using Async Storage to store the selected surah.

**Tech Stacks :** Javascript, React Native.
